

PRESS RELEASE

6 February 2026 | Warsaw, Poland

Title:

Volta Polska announces SaaS-focused webinar in the #VoltaEnergyLAB series

Summary:

On 18 February 2026 at 10:00 a.m., Volta Polska will host an expert webinar titled “SaaS – the key to green energy without investment and grid fees”. During the event, Michał Turowski, Business Development Manager at Volta Polska, will discuss the Solar as a Service (SaaS) model as a strategic decarbonization tool. He will explain how this solution enables the deployment of photovoltaic installations without capital expenditure, providing tangible savings and reducing companies’ carbon footprint. The session will be presented in Polish.

Volta Polska presents its latest webinar in the expert #VoltaEnergyLAB series. The event, scheduled for Wednesday, 18 February 2026 at 10:00 a.m., will explore how Solar as a Service (SaaS) installations can help companies address rising distribution costs and increasing regulatory pressure.

Participants will learn how behind-the-meter photovoltaic installations enable companies to generate and self-consume their own green energy on-site. This approach eliminates grid fees and capacity charges. It also provides long-term cost predictability and helps companies comply with evolving regulatory requirements.

Registered participants will have the opportunity to join a live Q&A and book one-on-one consultations with the Volta Polska team. The session will be presented in Polish. The event is free - registration is available at energylab.com.pl.

Quote:

“Solar as a Service enables companies to generate green energy on-site. By producing their own energy, companies avoid grid and capacity fees, which translates into tangible savings. Volta provides full investment financing, assumes the capital risk, and offers partners predictable energy costs and savings from the very first day of operation,” says Michał Turowski, Business Development Manager at Volta Polska.

“In the SaaS model, Volta is responsible for the installation – from construction through to day-to-day operations and maintenance (O&M). We ensure reliability and maximum

performance of every system, continuously monitoring and optimizing its operation so that clients can focus on their core business,” adds Philippe Daumont, Operations & Maintenance at Volta Polska.
